Accuy Natural Solutions
275 Route 10 East
Suite 220, Unit 171
Succasunna, NJ 07876

This letter serves as official notification that Accuy Natural Solutions is a participant in the US Department of Agriculture's (USDA) BioPreferred program. BioPreferred is a USDA-led program that aims to increase the purchase and use of sustainable, renewable biobased products. Biobased products are products that are composed in whole or in large part of agricultural or forestry materials; they may include plant, animal, or marine-based materials.

BioPreferred works with manufacturers, such as Accuy Natural Solutions, distributors, and large-scale buyers (e.g., the Federal government and the commercial sector) to increase awareness, purchase, and use of biobased products. Accuy manufactures Smell Guard – a product used to treat organic and ammonia based odors. Smell Guard is USDA "designated" (identified) for preferred Federal government purchasing. Smell Guard has also been certified with a biobased content of 100%.

One major way USDA shares information about the BioPreferred designated items is through a list of the products on our Web site. Please visit www.biopreferred.gov, and click on the link for the "catalog" to view the catalog categories for your product. Only biobased products that meet or exceed the minimum content established by USDA are designated and/or certified, and are listed in this catalog.

Federal government agencies, military branches, and Federal contractors must give preferred purchasing preference for BioPreferred biobased products — various mandates, regulations, and Presidential Executive Orders (EO) and Memorandums document this. The President's EO on Federal Sustainability (EO 13514 - Sept 2009) challenges the Federal government to lead by example, practice what we preach and help build a clean energy economy through the way we operate. Over the coming years, we look forward to working with you to translate government greening policy into practice and to creating lasting environmental change for generations to come.

Sincerely,

Ron Buckhalt
BioPreferred Program Manager
